Topic five

INTRODUCTION

Healthcare and technology are two fields that have been rapidly growing and intersecting in recent years. This project is a new doctor consultation app that aims to provide patients with a convenient and accessible way to connect with doctors, book appointments, and receive medical advices.

OBJECTIVES AND GOALS:

TECHNOLOGIES USED

- Front-end : Angular v 16 (HTML, CSS, TS)
- Angular Material
- Razorpay Test API (Payment)
- Back end : Spring boot 3.x
- Database : MongoDB v7.x

PROBLEM STATEMENT:

- ❑ The current healthcare system often involves long wait times, limited access to specialized medical professionals, and high healthcare costs. In order to address these challenges, there is a need for a new healthcare solution that can increase healthcare accessibility, improve the quality of care, and reduce the burden on patients and providers.
- ❑ A solution to this problem is to develop a Doctor Consultant Application that can connect patients with a wide range of medical professionals and enable remote consultations. However, developing such an application requires careful consideration of several key requirements to ensure that it is functional, secure, and user-friendly.
- ❑ Therefore, the development of a Doctor Consultant Application that meets these requirements has the potential to revolutionize the healthcare industry and provide patients with greater access to the care they need, while also reducing healthcare costs and improving patient outcomes.

TOPIC ONE
